

Developments in Chemical Engineering & Mineral Processing

The Australasian Research Journal

Volume 6, Numbers 1/2, 1998

ISSN 0969-1855

Special Theme Issue: Catalysis and Reactor Engineering

- 6 Editorial *Dr A.A. Adesina, University of New South Wales*
- 9 Investigation into the use of copper-loaded natural zeolite for the reduction of NO using methane *K.A. Headon and D.K. Zhang*
- 21 Process synthesis for a reactor-separator-recycle system using the attainable region approach *C. McGregor, D. Hildebrandt and D. Glasser*
- 41 Crossing reaction equilibrium in an adiabatic reactor system *W. Nicol, D. Hildebrandt and D. Glasser*
- 55 Recent developments in photocatalysis *R.F. Howe*
- 85 Aqueous phase oxidative degradation of 4-hydroxy nitrobenzene over a CuO-TiO₂ catalyst *C.L. Suen and A.A. Adesina*
- 101 Catalytic conversion of LPG to high-value aromatics: The current state of the art and future predictions *S.M. Al-Zahrani*
